H01N2-E BS EN 50525-2-81 Welding Cable

Eland Product Group: A2G

APPLICATION
These cables are used as a connection to welding robots in the automotive industry, shipyards and for manually/automatically operated lines and spot welding. The robust cable structure makes them resistant to low and high temperatures, ozone and radiation, oils, acids, fats and petroils.

CHARACTERISTICS

Voltage Rating
100V

Temperature Rating
Fixed: -40°C to +85°C
Flexed: -20°C to +85°C

Minimum Bending Radius
Flexed: 6 x overall diameter

CONSTRUCTION

Conductor
Extra flexible type Table B.2
Generally to Class 6 flexible copper conductor

Separator
PET (Polyester Tape)

Sheath
Rubber compound

Sheath Colour
• Black

STANDARDS

BS EN 60228, BS EN 50525-2-81, HD 22.6, VDE 0282-6

Flame Retardant according to BS EN/IEC 60332-1-2

ISO/IEC 17025 LABORATORY TESTED

This product is subject to the Quality Assurance protocols of The Cable Lab®, an ISO/IEC 17025 accredited cable testing laboratory. Testing includes vertical flame, conductor resistance, tensile & elongation, and dimensional consistency, verified to published standards and approved product drawings.

REGULATORY COMPLIANCE

This cable meets the requirements of the Low Voltage Directive 2014/35/EU and the RoHS Directive 2011/65/EU. RoHS compliance has been tested and confirmed by The Cable Lab® as meeting the requirements of the BSI RoHS Trusted Kitemark™.

Ambient Air Temperature: 25°C
Maximum Conductor Temperature: 85°C

The above table is from HD 516 S2:1997

**Duty Cycle and Current Carrying Capacity**

The current carrying capacity of a welding cable depends on the length of the duty cycle. The duty cycle is the length of time during which a loaded current passes through the cable over an operation period of 5 minutes, expressed as a percentage of that period. For example, if the current is flowing for the whole 5 minutes the duty cycle is 100%, and if the current is flowing for 1 minute the duty cycle is 20%. As conductor temperature varies according to the time in use as well as current, ratings shown are given as a guide.

The permissible loading of the cable for duty cycles other than those shown in the table can be calculated using the following formula: I = I₁₀₀ x √F

Where:
I : is the maximum permissible loading current for the required duty cycle.
I₁₀₀ : is the maximum permissible loading current for a duty cycle of 100%.
F : is the required duty cycle calculated as a percentage of the 5 minute operation period.

Typical guidance values for different welding processes are as follows:
Fully automatic welding 100%
Semi-automatic welding 65 - 85%
Manual Welding 30 - 60%
Very infrequent or occasional welding 20%
The above table is in accordance with HD 516:52

**DE-RATING FACTORS**
